

Operating Instructions

Propane Griddle

Note: Always follow local codes when operating this griddle.

To Light the 3 Pilots: Leave the griddle plate "ON"

1. The three main gas control valves should be "OFF" for at least five minutes to allow any accumulated gas to escape the combustion chamber.
2. Light pilot heads through the pilot, sight holes on the front of the griddle. (they will light even with the valve in the "off" position!)
3. Turn on the main gas valves one at a time. The burners should light.

If you have a problem lighting the pilots, you may remove the griddle plate and put a lighter directly to the burner (be sure to have a flame over the burner BEFORE turning on the Gas!) Note: you will need two people to remove the griddle plate, which is pretty heavy.

To Turn the Standing Pilot OFF:

1. Turn the gas control on the propane tank to the OFF position and ensure all burners are off.

Note: Pilots cannot be shut off unless the main gas supply to the unit is shut off.

Griddle Operating Suggestions & Cautions:

- **ALWAYS** allow sufficient time to ensure that the plate's temperature has reached the desired temperature before use.
- **NEVER** overheat the griddle plate and always reduce the temperature during idle periods.
- **ALWAYS** clean griddle plate after use and coat plate with a light coat of cooking oil.
- As a sanitary and safety precaution, **ALWAYS** keep the grease drawer clean and empty.

Troubleshooting Chart:

PROBLEM	PROBABLE CAUSE	POSSIBLE SOLUTION
1. Appliance will not ignite.	1a. No gas. 1b. Air in the gas line. 1d. Gas turned on too fast at the tank.	1a. Ensure gas is turned on. 1b. Purge air from the gas line. 1d. Turn on at tank very slowly.
2. Pilots will not light.	2a. Gas valve is shut off. 2b. Fans or air drafts interfering with pilot operation.	2a. Locate and adjust the pilot. 2b. Locate and eliminate air drafts.
