

# Operating Instructions

# Coffee Urns

**Note:** This unit draws more amperage than any appliance in your kitchen. Please use a dedicated 20-amp outlet

1. Remove the top, basket, and wand from inside the urn.
2. Fill with cold water to the desired line depending on the amount of coffee you would like to brew.
3. Replace the wand and basket inside the urn.
4. No paper filter is needed for this machine. Use the basket as your filter and pour dry coffee inside the basket.
5. Replace the top and plug it into a dedicated 20-amp circuit. (Do not plug anything else into the outlet, or the unit will not work.) Make sure this circuit does not have other outlets on it.  
**The coffee pot needs all 20 amps.**
6. Allow 1 hour for brewing time. (Brews at approximately 1 cup per minute).

## Clean up:

Rinse out all instruments when finished. Cleaning the coffee maker is not necessary. Just rinse off extra coffee debris.

## Measurements:

**2 cups dry coffee makes 30 brewed cups**

**6 cups make 90 brewed cups**

**One pound of coffee is approximately four  $\frac{3}{4}$  measured cups.**

**For any questions or concerns, be sure to contact us immediately.**

**Thank you for your business!**
