

# Soil Cultivator Operating Instructions

## **Starting the Soil Cultivator**

1. Depress the manual fuel pump bulb 4 or 5 times, even if already filled with fuel
2. **For Cold Start** Depress the choke knob and turn it counter clockwise to the top setting (Choke On)
3. **For Warm Start** Depress the choke knob and turn it to the middle setting.
4. Place unit on the ground, with left hand firmly on the handle, and pull the pull cord back. The unit should start. (Repeat step 4 if necessary)
5. Once engine is started, press down on the throttle lockout (top of handle) and squeeze the trigger. This will move the choke lever to the RUN position. You are now ready to use the unit.

## Switching Attachments

1. To switch attachments, remove the cotter pins on either side of the axle. Slide the attachment off and replace with desired item.
2. The powersweep paddles once remove, have an additional pin that must be removed in order to slide them off of the axle.

## Adjustments

- You can adjust the bicycle handle to your liking. Loosen the knob, swing to your desired position and then retighten!
- **When using a metal tool**, position the gearbox so that the shaft is below the drive tube
- **When using a sweeping tool**, position the gearbox so that the shaft is above the drive tube.

## **Gearbox Switching**

- There are two torx bolts on the side of the gearbox (T27). Loosen these bolts and spin the gearbox to the appropriate position according to the attachment being used (see above in 'adjustments')
